

Job description: **Senior Cloud Engineer**

Location: London, UK (with flexible working arrangements and regular visits to client sites)

About amelio:

amelio is a startup building software solutions tailored to the UK health and social care sector. We partner with health and social care organisations to create custom-designed tools which improve their operational efficiency, enhance their practitioners' decision-making, and positively impact outcomes for people in their care. Understanding that one-size-fits-all solutions are routinely ineffective, we strive to deliver tailor-made software tools that create a step-change in user-experience, security, and return on investment.

Role Summary:

We are seeking an experienced Senior Cloud Engineer to join our team, focusing on developing and managing the cloud-based infrastructure for our flagship product (more details on application). This role includes designing, implementing, and optimising cloud solutions to ensure scalability, security, and performance. The successful candidate will enjoy the flexibility of working from London, with options for remote work and the expectation of regular visits to client sites.

Key Responsibilities:

- Design, implement, and manage cloud-based infrastructure, ensuring scalability, security, and performance
- Collaborate with the engineering team to seamlessly integrate cloud services into our software solution
- Lead cloud architecture improvement initiatives, focusing on efficiency and security
- Serve as an expert in cloud computing technologies, especially Azure, guiding architectural and deployment decisions
- Engage with clients to align our work with their needs and security standards
- Stay updated on the latest technologies and security practices to maintain industry-leading standards

Requirements:

- Bachelor's or Master's degree in Computer Science, Engineering, or related field
- 5-8 years of experience in cloud computing, with expertise in designing, implementing, and managing cloud environments
- Strong knowledge of Azure cloud services, with experience in other cloud platforms beneficial
- Experience with Agile and DevOps methodologies, including CI/CD pipelines
- Familiarity with the health and social care sector is a plus but not required

Offer:

- Salary: £62,000-£77,000 per annum, depending on experience.
- Equity options, to be discussed upon application.

- Flexible working conditions, based in London.
- A chance to contribute to a growing startup that's making a significant impact on the UK health and social care sector.

If you're a Cloud Engineer passionate about using your skills to improve health and social care through innovative technology, we'd love to hear from you.
